

Updated models:

-The only thing I changed for my models was the addition of the picture attribute. So far my models have been working and have not been restrictive so I have not changed them.

Front-end Inspiration

-For this project I did look at a few websites but ultimately decided to keep my project simple for the time being. I am looking forward to doing more and making it feel more polished when I am finished with the course, but I need a refresher on CSS and I feel like I was getting too distracted while trying to make my website look cool. I feel like for now I want to stick with the course and really focus on what is required for each task.

Reflection Questions:

In your own words, explain Django static files and how Django handles them.

-Static files are files that don't change or require processing by django during runtime, such as images, CSS and JavaScript. Django stores these files in one or more directories that django can access. When the project is run the static files are collected and placed into a single directory for efficient serving to the client, this makes it easy for the developers to manage the static files no matter where within the project they are stored.

Look up the following two Django packages on Django's official documentation and/or other trusted sources. Write a brief description of each.

ListView- A generic view that simplifies the process of writing vies that display a collection of objects by handling the collection of objects and then rendering them to a template.

DetailView-Similar to Listview except it is aimed at displaying the details of a simple object. It fetches the object based on the primary key and passes it to a template.

You're now more than halfway through Achievement 2! Take a moment to reflect on your learning in the course so far. How is it going? What's something you're proud of so far? Is

there something you're struggling with? What do you need more practice with? You can use these notes to guide your next mentor call.

Being halfway through this achievement I feel proud to create the project I have so far. I feel like I am starting to get a good foothold of how django and python operate. I definitely need more experience but I feel much more confident than I did at the beginning of this course. I am excited to customize this app further once I am finished with the course.
